Correlated Data Analysis: Modeling, Analytics, and Applications (Springer Series in Statistics)

Peter X. -K. Song

Correlated Data Analysis: Modeling, Analytics, and Applications (Springer Series in Statistics) Peter X. -K. Song

This book covers recent developments in correlated data analysis. It utilizes the class of dispersion models as marginal components in the formulation of joint models for correlated data. This enables the book to cover a broader range of data types than the traditional generalized linear models. The reader is provided with a systematic treatment for the topic of estimating functions, and both generalized estimating equations (GEE) and quadratic inference functions (QIF) are studied as special cases. In addition to the discussions on marginal models and mixed-effects models, this book covers new topics on joint regression analysis based on Gaussian copulas.

From reader reviews:

Brian Wilson:

Why don't make it to become your habit? Right now, try to ready your time to do the important behave, like looking for your favorite guide and reading a guide. Beside you can solve your long lasting problem; you can add your knowledge by the publication entitled Correlated Data Analysis: Modeling, Analytics, and Applications (Springer Series in Statistics). Try to make the book Correlated Data Analysis: Modeling, Analytics, and Applications (Springer Series in Statistics) as your close friend. It means that it can to be your friend when you truly feel alone and beside associated with course make you smarter than ever before. Yeah, it is very fortunated for you. The book makes you much more confidence because you can know almost everything by the book. So , we should make new experience and knowledge with this book.

April Miller:

Book is actually written, printed, or illustrated for everything. You can realize everything you want by a guide. Book has a different type. To be sure that book is important issue to bring us around the world. Beside that you can your reading skill was fluently. A book Correlated Data Analysis: Modeling, Analytics, and Applications (Springer Series in Statistics) will make you to be smarter. You can feel much more confidence if you can know about anything. But some of you think that open or reading a book make you bored. It is far from make you fun. Why they could be thought like that? Have you in search of best book or suitable book with you?

Kevin Pennell:

In this 21st millennium, people become competitive in every single way. By being competitive today, people have do something to make these individuals survives, being in the middle of the actual crowded place and notice by means of surrounding. One thing that sometimes many people have underestimated that for a while is reading. Yes, by reading a book your ability to survive improve then having chance to stay than other is high. To suit your needs who want to start reading a book, we give you this specific Correlated Data Analysis: Modeling, Analytics, and Applications (Springer Series in Statistics) book as starter and daily reading e-book. Why, because this book is more than just a book.

Tim Gonzalez:

As a scholar exactly feel bored to help reading. If their teacher inquired them to go to the library or to make summary for some publication, they are complained. Just minor students that has reading's heart and soul or real their passion. They just do what the trainer want, like asked to go to the library. They go to right now there but nothing reading seriously. Any students feel that studying is not important, boring as well as can't see colorful pictures on there. Yeah, it is to become complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. Therefore this Correlated Data Analysis: Modeling, Analytics, and Applications (Springer

Series in Statistics) can make you feel more interested to read.
