BIM for Structural Engineering and Architecture

Building Information Modeling: Framework for Structural Design outlines one of the most promising new developments in architecture, engineering, and construction (AEC). Building information modeling (BIM) is an information management and analysis technology that is changing the role of computation in the architectural and engineering industries. The innovative process constructs a database assembling all of the objects needed to build a specific structure. Instead of using a computer to produce a series of drawings that together describe the building, BIM creates a single illustration representing the building as a whole. This book highlights the BIM technology and explains how it is redefining the structural analysis and design of building structures.

BIM as a Framework Enabler

This book introduces a new framework—the structure and architecture synergy framework (SAS framework)—that helps develop and enhance the understanding of the fundamental principles of architectural analysis using BIM tools. Based upon three main components: the structural melody, structural poetry, and structural analysis, along with the BIM tools as the frame enabler, this new framework allows users to explore structural design as an art while also factoring in the principles of engineering. The framework stresses the influence structure can play in form generation and in defining spatial order and composition. By highlighting the interplay between architecture and structure, the book emphasizes the conceptual behaviors of structural systems and their aesthetic implications and enables readers to thoroughly understand the art and science of whole structural system concepts.

- Presents the use of BIM technology as part of a design process or framework that can lead to a more comprehensive, intelligent, and integrated building design
- Places special emphasis on the application of BIM technology for exploring the intimate relationship between structural engineering and architectural design
- Includes a discussion of current and emerging trends in structural engineering practice and the role of the structural engineer in building design using new BIM technologies

Building Information Modeling: Framework for Structural Design provides a thorough understanding of architectural structures and introduces a new framework that revolutionizes the way building structures are designed and constructed.

From reader reviews:

Melanie Moore:

In this 21st millennium, people become competitive in most way. By being competitive currently, people have do something to make these survives, being in the middle of the crowded place and notice by simply surrounding. One thing that oftentimes many people have underestimated this for a while is reading. That's why, by reading a reserve your ability to survive raise then having chance to endure than other is high. For yourself who want to start reading the book, we give you this particular Building Information Modeling: Framework for Structural Design book as nice and daily reading reserve. Why, because this book is usually more than just a book.

Harry Keller:

Reading a e-book can be one of a lot of pastime that everyone in the world likes. Do you like reading book thus. There are a lot of reasons why people enjoy it. First reading a reserve will give you a lot of new data. When you read a book you will get new information since book is one of several ways to share the information or perhaps their idea. Second, reading a book will make you more imaginative. When you reading a book especially fictional book the author will bring you to imagine the story how the figures do it anything. Third, you are able to share your knowledge to other individuals. When you read this Building Information Modeling: Framework for Structural Design, you can tells your family, friends in addition to soon about yours guide. Your knowledge can inspire different ones, make them reading a guide.

Christina Vallejo:

Why? Because this Building Information Modeling: Framework for Structural Design is an unordinary book that the inside of the guide waiting for you to snap it but latter it will surprise you with the secret this inside. Reading this book close to it was fantastic author who all write the book in such amazing way makes the content interior easier to understand, entertaining method but still convey the meaning completely. So , it is good for you for not hesitating having this anymore or you going to regret it. This amazing book will give you a lot of advantages than the other book have such as help improving your talent and your critical thinking technique. So , still want to hold off having that book? If I were being you I will go to the publication store hurriedly.

Douglas Gibson:

In this time globalization it is important to someone to find information. The information will make you to definitely understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of referrals to get information example: internet, paper, book, and soon. You can see that now, a lot of publisher this print many kinds of book. The particular book that recommended to you is Building Information Modeling: Framework for Structural Design this reserve consist a lot of the information on the condition of this world now. This specific book was represented how does the world has

grown up. The words styles that writer use to explain it is easy to understand. Often the writer made some analysis when he makes this book. Honestly, that is why this book ideal all of you.
