Statistical Methods for Recommender Systems

Deepak K. Agarwal, Bee-Chung Chen

Statistical Methods for Recommender Systems Deepak K. Agarwal, Bee-Chung Chen

Designing algorithms to recommend items such as news articles and movies to users is a challenging task in numerous web applications. The crux of the problem is to rank items based on users' responses to different items to optimize for multiple objectives. Major technical challenges are high dimensional prediction with sparse data and constructing high dimensional sequential designs to collect data for user modeling and system design. This comprehensive treatment of the statistical issues that arise in recommender systems includes detailed, in-depth discussions of current state-of-the-art methods such as adaptive sequential designs (multi-armed bandit methods), bilinear random-effects models (matrix factorization) and scalable model fitting using modern computing paradigms like MapReduce. The authors draw upon their vast experience working with such large-scale systems at Yahoo! and LinkedIn, and bridge the gap between theory and practice by illustrating complex concepts with examples from applications they are directly involved with.

From reader reviews:

Corene Albert:

As people who live in typically the modest era should be change about what going on or facts even knowledge to make all of them keep up with the era which is always change and make progress. Some of you maybe will certainly update themselves by looking at books. It is a good choice in your case but the problems coming to a person is you don't know which one you should start with. This Statistical Methods for Recommender Systems is our recommendation to cause you to keep up with the world. Why, because this book serves what you want and want in this era.

Tatum Martin:

A lot of people always spent their free time to vacation or even go to the outside with them family or their friend. Were you aware? Many a lot of people spent that they free time just watching TV, or playing video games all day long. If you would like try to find a new activity that's look different you can read the book. It is really fun for you personally. If you enjoy the book which you read you can spent all day long to reading a e-book. The book Statistical Methods for Recommender Systems it doesn't matter what good to read. There are a lot of people who recommended this book. These folks were enjoying reading this book. In case you did not have enough space to create this book you can buy typically the e-book. You can m0ore effortlessly to read this book from a smart phone. The price is not to cover but this book possesses high quality.

Marianne Haglund:

You may get this Statistical Methods for Recommender Systems by check out the bookstore or Mall. Only viewing or reviewing it can to be your solve problem if you get difficulties for your knowledge. Kinds of this book are various. Not only simply by written or printed but additionally can you enjoy this book by means of e-book. In the modern era such as now, you just looking from your mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your book. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose proper ways for you.

Macie Tiffany:

A lot of book has printed but it differs. You can get it by web on social media. You can choose the most effective book for you, science, amusing, novel, or whatever through searching from it. It is called of book Statistical Methods for Recommender Systems. You can contribute your knowledge by it. Without departing the printed book, it might add your knowledge and make anyone happier to read. It is most essential that, you must aware about publication. It can bring you from one destination for a other place.
