## RESEARCH ON ENERGY ISSUES IN CHINA Jiang Zemin

China's rapid economic expansion raises questions internally and externally about how it will acquire the energy it needs to sustain growth. Currently it is the largest producer and consumer of coal; how much will it continue to rely on its abundant natural resource in the face of increasing environmental concerns? Will it embrace new clean coal technologies developed by others or invest in its own? Currently it imports 50% of the oil it consumes; will it invest in technologies that scrub the ocean floor for petroleum deposits? Will it develop new distribution technologies to bring its natural gas reserves closer to population centers? What role will conservation play? And how will China relate to the rest of the international community as it addresses these critical issues.

Research on Energy Issues In China presents one prominent insider's view of China's key energy issues and his strategy for addressing them. A collection of papers authored by Jiang Zemin, former president of the People's Republic of China, it appears here in English for the first time. Jiang's message is an exhortation to the Chinese to invest in science and technology, and research and development, to ensure the steady supply of energy so crucial for sustaining and driving development. He outlines this energy strategy for China: "we need to steadfastly conserve energy, use it efficiently, diversify development, keep the environment clean, be technology driven and cooperate internationally in order to establish a system of energy production, distribution and consumption that is highly efficient, uses advanced technology, produces few pollutant, has minimal impact on the ecosystem, and provides a steady and secure energy supply."

Within ten to twenty years, China may well be the world's largest energy consumption and supply system. This volume offers policy makers, energy industry analysts, researchers, and investors an inside view of how it plans to get there.

- Compares China's current energy situation with the developed world.
- Details specific challenges and opportunities in China with respect to coal, oil, nuclear, natural gas, solar, biomass, hydrogen, geothermal, wind, and ocean
- Presents an eight point energy development policy
- Provides a guide to China's future investment in research and development.

### From reader reviews:

#### Jason Urso:

Information is provisions for people to get better life, information presently can get by anyone in everywhere. The information can be a information or any news even an issue. What people must be consider while those information which is in the former life are challenging be find than now could be taking seriously which one is acceptable to believe or which one the resource are convinced. If you have the unstable resource then you understand it as your main information you will have huge disadvantage for you. All those possibilities will not happen throughout you if you take RESEARCH ON ENERGY ISSUES IN CHINA as the daily resource information.

#### Robert Alleman:

The guide with title RESEARCH ON ENERGY ISSUES IN CHINA has a lot of information that you can find out it. You can get a lot of benefit after read this book. This kind of book exist new understanding the information that exist in this e-book represented the condition of the world now. That is important to yo7u to know how the improvement of the world. This specific book will bring you inside new era of the syndication. You can read the e-book in your smart phone, so you can read that anywhere you want.

#### Keely Charles:

Playing with family inside a park, coming to see the ocean world or hanging out with pals is thing that usually you will have done when you have spare time, and then why you don't try point that really opposite from that. One particular activity that make you not sense tired but still relaxing, trilling like on roller coaster you are ride on and with addition of knowledge. Even you love RESEARCH ON ENERGY ISSUES IN CHINA, it is possible to enjoy both. It is good combination right, you still want to miss it? What kind of hang type is it? Oh can occur its mind hangout men. What? Still don't buy it, oh come on its known as reading friends.

#### Donald Vermillion:

Guide is one of source of expertise. We can add our know-how from it. Not only for students but in addition native or citizen have to have book to know the revise information of year in order to year. As we know those guides have many advantages. Beside we add our knowledge, also can bring us to around the world. Through the book RESEARCH ON ENERGY ISSUES IN CHINA we can acquire more advantage. Don't you to be creative people? To get creative person must like to read a book. Only choose the best book that suited with your aim. Don't always be doubt to change your life by this book RESEARCH ON ENERGY ISSUES IN CHINA. You can more inviting than now.
